

# PFAS Solutions

Equipment, Media, Controls, Design, AFFF Disposal, and More

*Helping You and Your Community  
Maintain a Peace of Mind*

Ex-Situ Remediation Water | Municipal Water Supply | Industrial Wastewater | Impacted Storm Water Ponds

Private and Government Sectors | Airports | Marine Ports | Petroleum and Chemical Facilities | Numerous Others

Removing PFAS from water with high-capacity systems that are **SMALLER**, highly **EFFICIENT**, and more **COST-EFFECTIVE**

## Our Team's Experience

- Treatment of PFAS concentrations ranging from 90 ppt to over 300,000 ppt to within regulatory limits or non-detect levels
- PFAS system flow rates from 5 to 1,800+ gpm
- More than 20 systems installed or under construction and growing regularly!
- Hundreds of millions of gallons already treated
- Very active in research and development

## What We Offer

- Equipment, media, controls, and design
- Quick turn-around for full-scale systems
- Modular designs to fit your facility's needs
- Systems that are **smaller, efficient, and cheaper**
- Fewer media change-outs = less waste
- Disposal services for media, AFFF, and materials
- Immediate response with mobile units
- Reliability, confidentiality, and compliance

**Ion Exchange (IX):** The exchange of ions between a solid substance (i.e. resin) and an aqueous solution. We offer systems with a proprietary resin with the **dual removal mechanisms** of ion exchange and adsorption built into each bead for maximum uptake of PFAS compounds. Single use and regenerable systems are available to meet the specific needs of a given site.

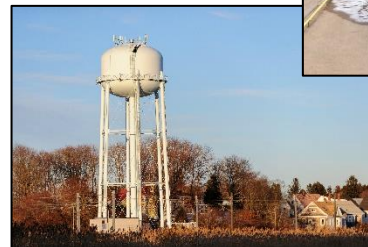

**Granular Activated Carbon (GAC):** The adsorption of compounds to a porous carbon material. Affordable and effective at removing PFAS compounds.

**Mobile Treatment Units:** We offer mobile units for emergency response, dewatering, pilot testing, and storage tank cleaning.

**Disposal Services:** Aqueous Film Forming Foam (AFFF), GAC/IX media, and impacted soil and materials

*If you already have a PFAS treatment system, we can help reexamine the process to make sure you have the best media and system at the most economical cost for you. We excel at saving money for our clients while ensuring you stay in compliance and continue providing reliable and clean water for your community.*

**Call us today to discuss your PFAS removal needs!**
